

MEETING REPORT

Team Name: AC Supply Chain AI **Date of Meeting:** 21 April 2025

Start Time: 10:00 **End Time:** 12:30 **Meeting Location:** Faculty Computer Lab, Room 204

Moderator: Alesia Gjeta **Recorder:** Alesia Palloshi

Other Members Present: Enisa Halilaj, Natali Muca, Sabina Merkaj,
Alesia Palloshi, Alesia Gjeta

Members Absent: None

Topics Discussed:

- Live demo of authentication flow: register, login, JWT token returned, protected routes working correctly.
- Review of ARIMA demand forecasting: per-category model training confirmed; year labels (2025/2026) corrected.
- Critical issue resolved: ARIMA was loading a single generic model; now correctly loads per-category saved models from disk.
- Inventory status display logic: corrected shuffle-based assignment with defined counts for out-of-stock, low-stock, and ok statuses.
- Anomaly detection hybrid approach agreed: ANOM-prefixed orders fetched separately and passed through rule-based detection in inference.py.
- Frontend integration: Chart.js forecast graph rendering with real API data; inventory table filtering working.
- Testing report by Alesia Palloshi: 12 manual test cases executed, 3 bugs found (2 fixed, 1 pending — chart tooltip misalignment).

Decisions Made:

- Anomaly detection: hybrid approach adopted — inference.py uses ANOM-prefix detection for seeded anomalous orders; rule-based thresholds for all orders.
- ARIMA models: per-category training is the confirmed correct architecture; single generic model is deprecated.

- Forecast year labels corrected to 2025/2026 to reflect the current academic year context.
- Inventory status shuffle logic fixed: explicit counts per status (out-of-stock: 3, low-stock: 5, ok: remainder).
- One remaining bug (forecast chart tooltip misalignment) to be fixed before Week 4.

Tasks Assigned:

- Fix forecast chart tooltip; integrate supplier lookup on product detail page — Alesia Palloshi (due: 25 Apr)
- Complete inference.py hybrid anomaly detection; add unit tests for ANOM-prefix path — Alesia Gjeta (due: 25 Apr)
- Add remaining API endpoints: anomaly list, supplier CRUD, demand history — Natali Muca (due: 25 Apr)
- Update DB seed with 7 realistic ANOM orders; verify all constraints pass — Sabina Merkaj (due: 25 Apr)
- Code review of all open PRs; update project documentation — Enisa Halilaj (due: 25 Apr)

Time, Place, and Agenda for Next Meeting:

- Monday, 28 April 2025 at 10:00 — Faculty Computer Lab, Room 204. Agenda: Final integration test; end-to-end walkthrough of all features; submission preparation; presentation rehearsal.
